

Task_3

1. Create a new user in admin and give the access to that user. Then in user we give the login name,password for the user access,confirm the password,login will be enabled if not then user can't login after that refresh

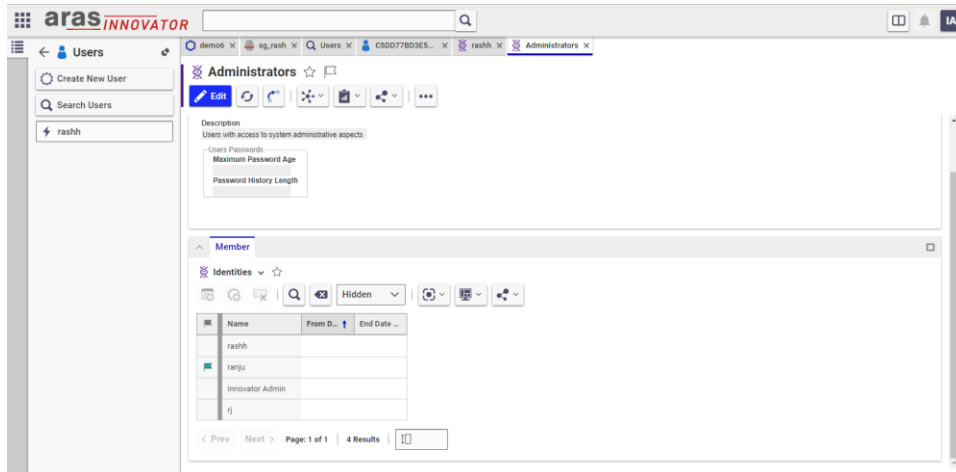

The screenshot shows the Aras Innovator 'Users' page. On the left, there is a sidebar with 'Create New User', 'Search Users', and a list of users including 'rashh'. The main area displays the 'User' form for a user with ID 'C5DD77BD3E5944D2BB57361FADC02D4A'. The form includes fields for Login Name (rashh), Password, Confirm Password, Login Enabled (checked), Starting Page, Default Vault, First Name, Last Name, Company Name, Email, Telephone, Mail Stop, Fax, Home Phone, Picture, Cell, Pager, Employee #, Manager, and Working Directory. Below the form, there is a section for 'Aliases' and 'Read Vaults'.

2. then created the user in admin and in identity give the name (rashh) then give the is Alias =it will says the no one can create another after the first user. then in below member identities choose the search the admi* then after select that then give the user name after that.

The screenshot shows the Aras Innovator 'Users' page with the 'rashh' user selected. The main area displays the 'Identity' form for the user. The form includes fields for Name (rashh), Is Alias (checked), Description, Users Passwords, Maximum Password Age, and Password History Length. Below the form, there is a section for 'Member' identities. A table lists the identities, with 'Administrators' and 'rashh' visible. The 'rashh' identity is selected.

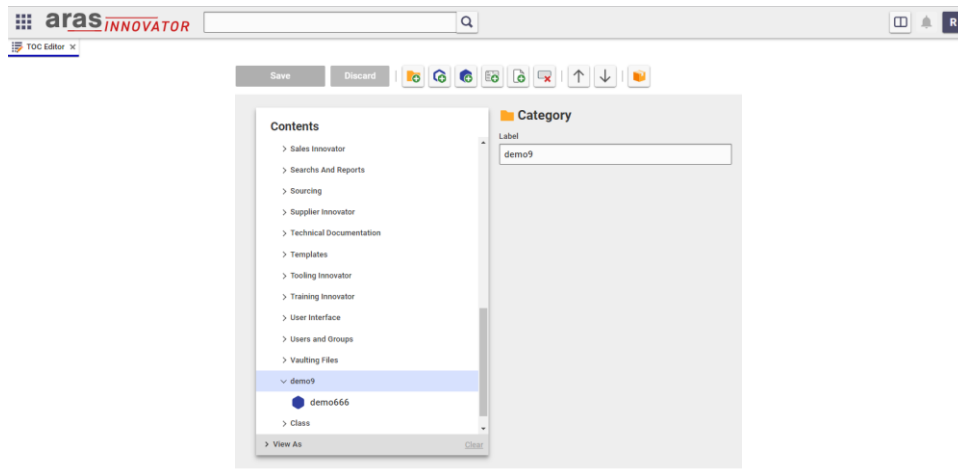

3. after that open the administrators then below identities below it will shows the users names and innovator admin

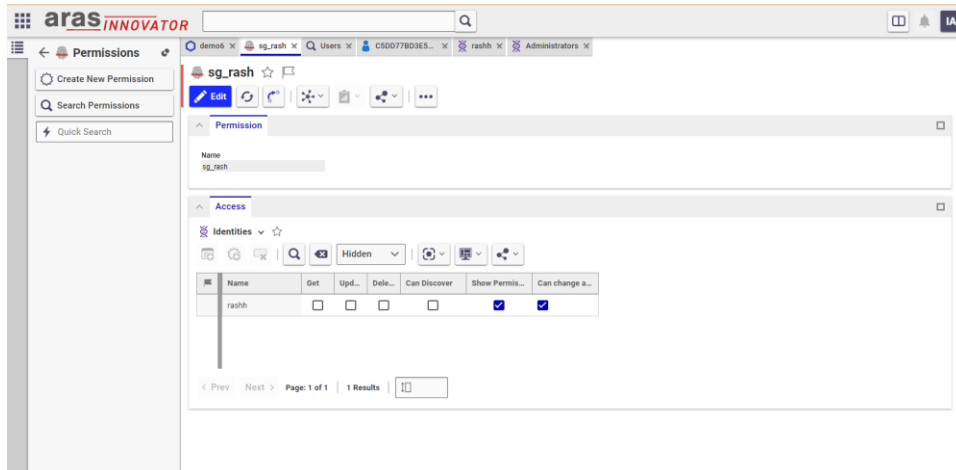

4. after that we login our user id in another window after that login using our user information

Then it show all itemtypes logos before it show only few but when we give the access through the admin it shows all item types.

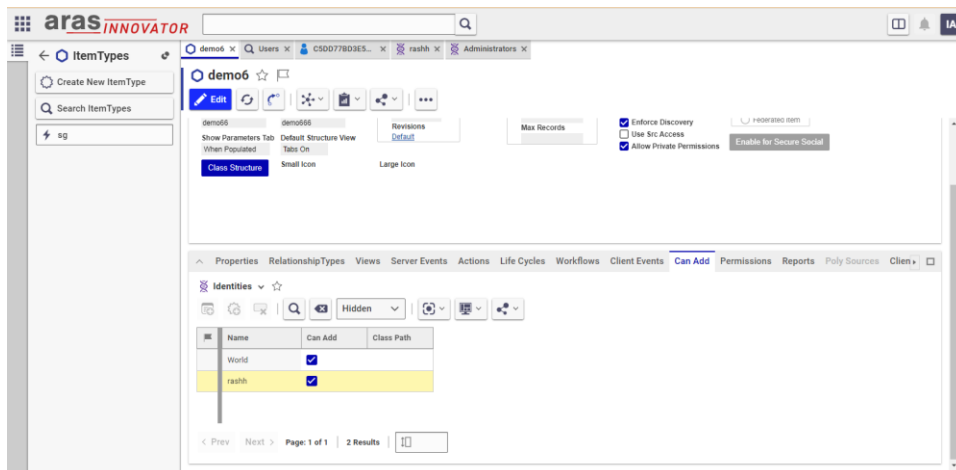

Then go to the configuration and after toc editor then create a new category(demo9)then we drag and drop the item type in the new category then save it.

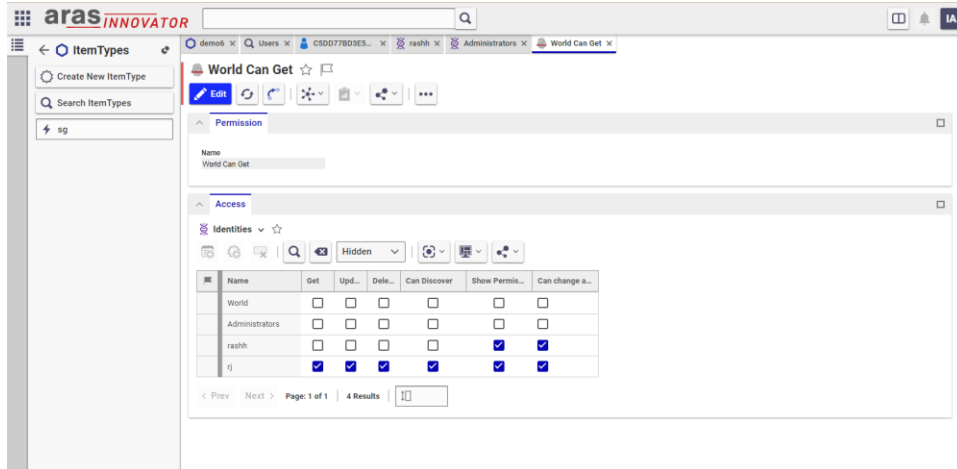

5. Go to the admin search and open the permission after that give the name (sg_rash) then below access identities then search our user name (rashh) then tick only show permission and can change access.

6. after go the item type then open the demo6 item type then below can add then identities then choose our user name then tick because because in can add will show who can I add.

7. after give the information to the form and save it will show this error.
