

1. Create User - To give access to our client.

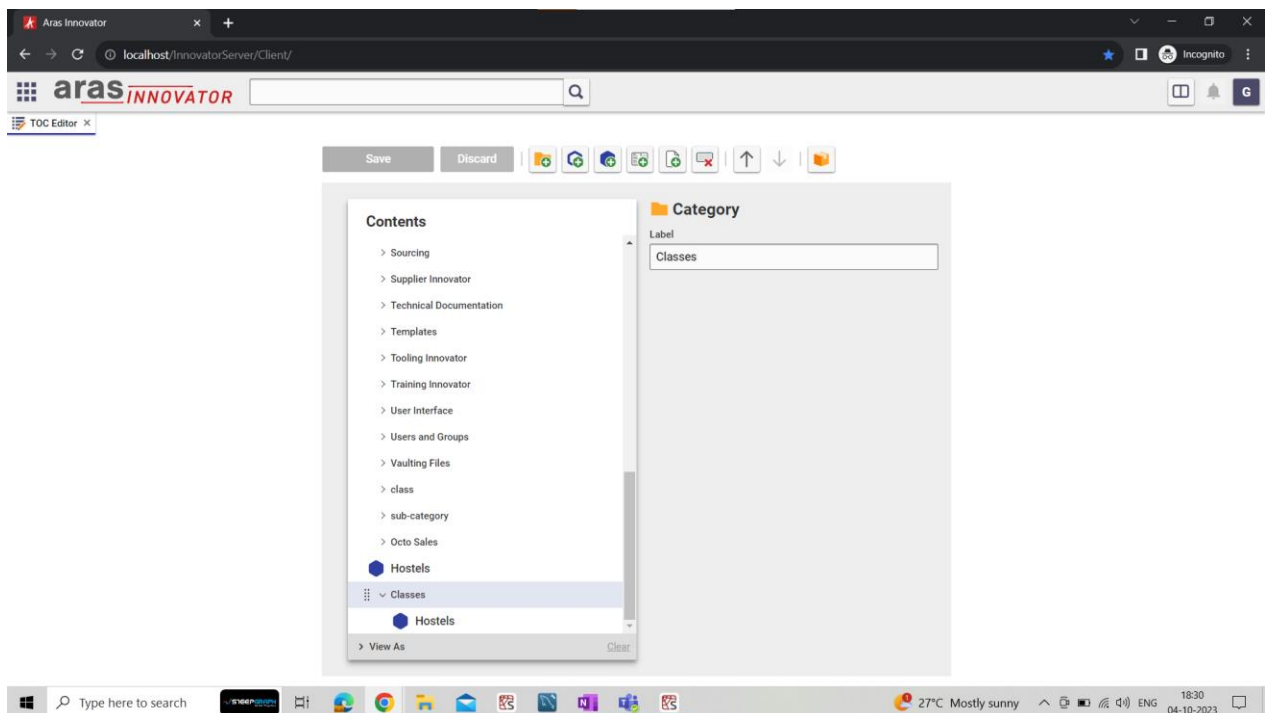

2. Is Alias – If we enabled Alias, it represents that no child user will exist or nor created.

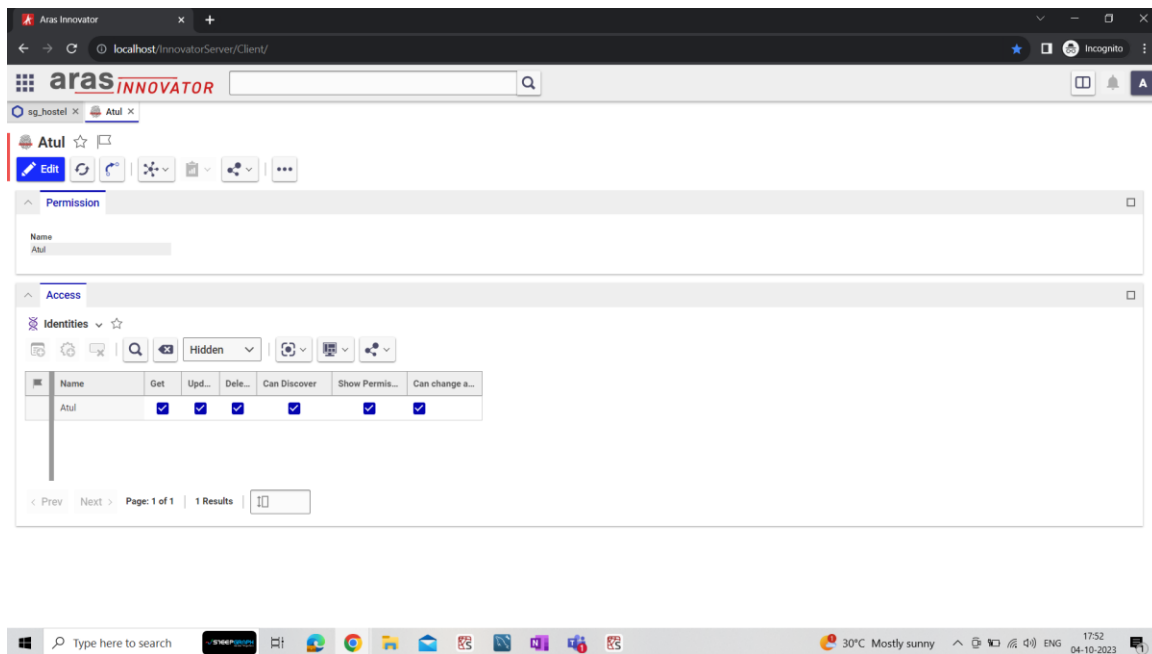

3. TOC Access – We give the user TOC access from the admin so that he can access Item Types.

4. Category Created – We create a category so that we can have all our item types in one category.

5. Permissions – We give permissions to the user so that he can customize item types as requirement.

6. Can Add – It allows the user to create new item.
