Task 2
 In this task we have perform several things:

1) User
2) Is Alias
3) Toc Access
4) Category
5) Permission
6) Can Add
7) Show Permission Warning

1)User:

This Field we have create a new User and give password to secure the user data and give permission to logon enabled check box.

After creating user copy link and paste in the Private window.

2)Is Alias:

After opening the new user to get access go back to the admin and get the identities and check the alias box.
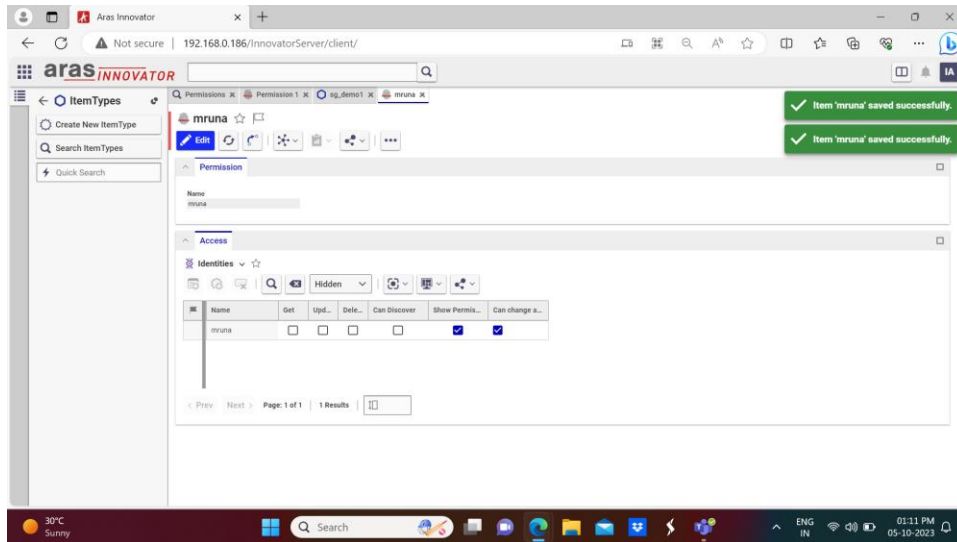

3)Toc Editor:

4) Category:

Go to Toc Editor and create new category then add in item type drag and drop the created category.

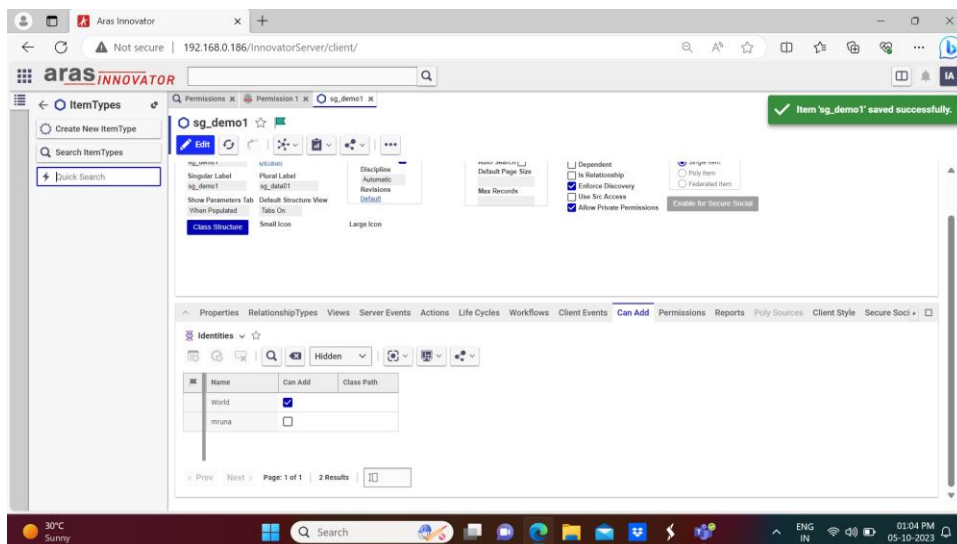

5)Permission:

Go to the admin search and open the permission after the given name then below access identities then search our user name.

 6)Can Add:

After go to the item type open the item type then below can add then identities then choose our user name then check because in can add will show who can I add.

7)Show Permission Warning:

Go to admin then open Item type then add details in form to get warning.

Because we have not give permission to user.
